(57) Abstract:

PROBLEM TO BE SOLVED: To reduce the number of parts and eliminate wasteful assembling works so as to reduce production cost and prevent a sealing member from cut so as to hold its sealing performance by adopting an integrated type sealing clip.

SOLUTION: A sealing clip mounted on a flat fixing plate 11 to which a wire harness 12 can be fitted is composed of a disc sealing member 14 and a check lock body 15 which is integrally provided with the sealing member 14, erected from the sealing member 14, and inserted into the opening part 17a of a panel 17 so as to be prevented from being pulled out and locked thereto. When the check lock body 15 is prevented from being pulled out and locked to the opening part 17a of the panel 17, the opening part is sealed by the sealing member 14.
